Probe Card and Test Program Verification Work Station

The Jr-2745 8" manual probe station with an LMS-18 Probe Card adapter is productive solution to probe card and test program verification work station. Compatible with standard 62 mil or stiffened 125 mil 4.5" wide probe cards. Probe card holder does not interfere with top plate surface allowing placement of positioners with probes for trouble shooting. A basic manual probe station furnishes the important function of supporting the test wafer, fixtures the probe card, supplying a work surface for trouble shooting test hardware and software without tying up production style probing equipment.
